

Rebuttal

We read the reviews made by all 6 classmates. Thanks for their comments on our report. We have a clear understand on the shortcomings of our model and the report. Such as the LGB is overfitting, EDA in the report is not detailed and representative enough, the explanation of LGB model is not specific enough, LSTM and Arima can be optimized, etc. Here we make an explanation relative to the first point of the weakness of the third review: *The problem statement, dataset description, and the goal of this project are not given clearly in this report.* We briefly describe the problem description and the goal of the problem in abstract, and we give an overview of the dataset in the first two paragraphs of part 1.1. Due to the space limitation of the article, we suppose that the focus of the content should be on the description of the subsequent modeling and result analysis. Therefore, we omit some common or known content.
