

Large Language Models with Financial Analysis

MAFS5440 2024Fall

Large language models use transformer models and are trained using massive datasets — hence, large. This enables them to recognize, translate, predict, or generate text or other content.

What LLM can do for financial analysis?

1. Interpreting Data
2. Modeling Predict
3. Automated Reporting
4. Market Analysis
5. Risk Assessment

Financial Statement Analysis with Large Language Models

Alex G. Kim¹ Maximilian Muhn² Valeri V. Nikolaev³

This draft: May 20, 2024

GPT-4 can outperform professional financial analysts in predicting future earnings changes, generating useful narrative insights, and resulting in superior trading strategies with higher Sharpe ratios and alphas, thereby suggesting a potential central role for LLMs in financial decision-making.

<https://arxiv.org/pdf/2407.17866>

BloombergGPT

- trained an LLM using a mixture of finance data and general-purpose data, which took about 53 days, at a cost of around **\$3M**)
- Improving existing financial NLP tasks, such as sentiment analysis, named entity recognition, news classification, and question answering.

Open Financial LLMs. Can be fine-tuned swiftly to incorporate new data (the cost falls significantly, less than **\$300 per fine-tuning**).

Single Stock Outlook

Stock Symbol

goog

^Title: Alphabet (GOOG) Stock Outlook for 2023-2027

Introduction: Based on the analysis from Wall Street analysts over the past three months, Alphabet (NASDAQ: GOOG) stock has garnered positive reviews. With 1 out of 8 analysts giving it a bullish rating and the remaining 7 being somewhat bullish, it seems that the market expects Alphabet to perform well over the next few years. The following report will outline the outlook for GOOG stock from 2023 to 2027, including potential risks and headwinds.

Average Price Target: The average price target for Alphabet stock in the next 12 months, according to the 8 analysts, is \$125.75, with a high of \$155.00 and a low of \$116.00. This average price target has increased by 1.31% over the past month.

Positive Factors:

1. **Continued Dominance in Online Advertising:** Alphabet, through its subsidiary Google, largely dominates the online advertising market, which is expected to grow further in the coming years. As more businesses shift their advertising budgets to online platforms, Alphabet stands to benefit from this transition.
2. **Expansion into Cloud Computing and Artificial Intelligence:** Alphabet is investing heavily in cloud computing and AI technologies, which could further strengthen its position in these high-growth markets. The company's Google Cloud Platform is being increasingly adopted by businesses, and its AI offerings continue to innovate and adapt to new market needs.

^Title: Competition Between Alphabet's (GOOG) and Microsoft's (MSFT) Stocks Intensifies as AI Developments Advance

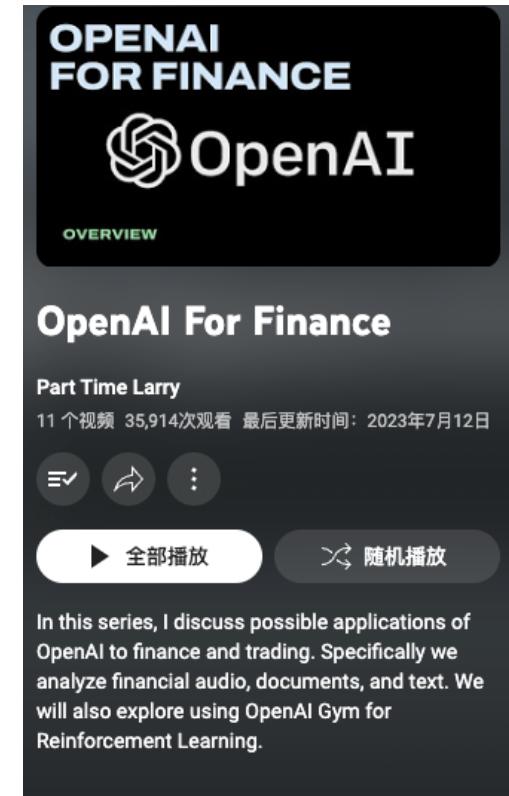

Introduction: Alphabet (GOOG) and Microsoft (MSFT) stocks have been under the spotlight as emerging competition in the search engine space, driven by advancements in artificial intelligence (AI) technologies. Recent reports of Samsung considering replacing Google Search with Microsoft's Bing across its devices has further intensified the rivalry between these tech giants.

Samsung's Potential Switch to Bing: While Alphabet's Google has enjoyed a stronghold in the search engine space, a recent New York Times report suggests that tech giant Samsung may replace Google Search with Microsoft Bing as the default search engine across its devices. This has led to a decline in Alphabet's stocks by 2% as around

Local-deployed FinGPT-Forecaster

FinGPT Forecaster

What is FinGPT-Forecaster?

1. An AI tool analyzing market news and optional financial data for a specific company.
2. Offers a stock price movement forecast for the upcoming week along with summarized analysis.
3. Fine-tuned on **Llama-3-7b-chat-hf** with **LoRA** using past year's DOW30 market data.
4. Demonstrates adaptability and generalization capabilities across various stock symbols.

FINGPT

Let us not expect Wall Street to open-source LLMs or open APIs, due to FinTech institutes' internal regulations and policies.

Build by

An open-source organization focused on advancing AI within the finance sector

FinGPT-Forecaster

FinGPT-Forecaster takes random market news and optional basic financials related to the specified company from the past few weeks as input and responds with the company's **positive developments** and **potential concerns**. Then it gives out a prediction of stock price movement for the coming week and its **analysis summary**.

This model is finetuned on Llama2-7b-chat-hf with LoRA on the past year's DOW30 market data. Inference in this demo uses fp16 and **welcomes any ticker symbol**. Company profile & Market news & Basic financials & Stock prices are retrieved using yfinance & finnhub. This is just a demo showing what this model is capable of. Results inferred from randomly chosen news can be strongly biased. For more detailed and customized implementation, refer to our FinGPT project: <https://github.com/AI4Finance-Foundation/FinGPT>

Disclaimer: Nothing herein is financial advice, and NOT a recommendation to trade real money. Please use common sense and always first consult a professional before trading or investing.
