This project is great and it follows the normal process about data analysis and machine learning. They don't choose only one dataset as training dataset but using 7 dataset, so they get great Kaggle Score as they expect. Their poster is clear and simple but does not lose fine, which show me the clearly data process and help me to find every part when I am confused. At the meanwhile, the poster dismiss the disadvantage of poster ,and use the most direct way(the roc curve picture) showing me the result. However, it has little problem about the poster introduction composition. For the technical quality, their result is quite sound, and I also run the code and get the similar result. In my view, the project almost have no obvious flaws ,but doesn't cite any relevant paper or others.

So, it is a good report(4), and I have carefully read the paper and check the result.
