Peer Review

■ **Summary of the report**

In the report, they would like to share their experience of applying the Logistic Regression Model to complete this competition. And the whole article is divided into six parts, which are Introduction, Problem Definition, Data, Feature Selection, Logistics Regression and Model Further Improvement respectively. They used data-set named application train.csv and application test.csv through the project, which is the main table offered by Home Default.

■ **Strengths of the report**

1. They described the complete idea of the project and the detailed completion process.

2. They tried several methods.

■ **Weaknesses of the report**

1. Although they tried two methods of selecting features, they did not find a suitable method in the end and still chose all the variables for analysis.

2. They have some detailed errors in the report, such as spelling mistakes.

■ **Evaluation on clarity and quality of writing**
