Review for group9

1. Summary

This project predicts the default risk by the probability for each loan record in the Home Credit Sample. I think it's a very good project.

2. Strength

(1) well organized

In the poster, we can clearly and intuitively know what the author has done.

(2) Nice typography

The first impression it gives me is that it is very beautiful, even as an academic poster, it has a sense of art.

(3) Full work

It can be seen that in order to obtain better results, the author has done a lot of work, including model construction and feature engineering.

(4) High score

In the poster, we see that the final model's running score is very high, and its ranking on kaggle is also very high. It has to be said that it is very successful.

3. Weakness

In my opinion some minor deficiencies cannot be called weaknesses, but if I must say, I hope that the strategy can be clearly stated in the feature selection and construction part.

4. Evaluation on Clarity and quality of writing: (5 points)

Simply put, it's almost perfect.

5. Evaluation on Technical Quality (5 points):

I think the author is challenging for this model, but they still achieve a high degree of completion, which is admirable.And it can be seen that the author has a very deep understanding of the built model and framework.

6. Overall Rating: (5 points)

I think the author has done a lot of work, his attitude is impeccable, and the description of each step is also very standardized, the score is also high, and the overall is a near-perfect poster.

I was struck by the perfection of this poster, even if there are some minor deficiencies，I think it is worthy for a 5 point rating.
